

Whole-of-Government Humanitarian Spending 2019 Update

--- Response Network ----

of CANADA

Figure Whole-ofgovernment humanitarian spending

> Humanitarian spending rose dramatically between FY2012-13 and FY2013-14, from \$528 million to \$857 million. It fell briefly in FY2015/16 to \$738 million, but has since risen back to reach an all-time high of \$897 million in 2017/18. The jump from FY2012/13 to FY2013/14 represented a 62% (or \$328 million) increase, the largest year-on-year increase (both in dollar terms and as a percentage) in at least the last decade. Budget 2018 signalled the establishment of a dedicated pool of funding for humanitarian assistance, with \$738 million – the year-end low of the last five years – as the starting point for this pool.

Figure 02 Humanitarian assistance as a percentage of total official development assistance

Overall, humanitarian assistance seems to have stabilized as a portion of total official development assistance (ODA) at approximately 15%. This represents a significant change over the past decade in which humanitarian assistance has increased its proportion of total ODA by more than a third.

Figure 03 Whole-ofgovernment humanitarian spending breakdown by sector

> Material relief assistance and services, as well as emergency food aid, remain the predominant elements (over 80%) collectively in 2017/18) of Canadian humanitarian assistance.

> Relief coordination, which had seen an enormous eightfold increase over the past five years, dropped by nearly 45% in 2017/18. It still sits well above where it was five years ago.

> Investments in disaster prevention and preparedness continue a period of growth relative to ten years ago, hitting \$48 million in FY2017/18. This constitutes just over 5% of all humanitarian assistance support.
